12 POWER Use this switch to turn the amplifier on top of the switch depressed and off bottom of the switch depressed. 13 POWER CORD rear panel, not shown The grounded power cord should only be plugged into a grounded power outlet that meets all applicable electrical codes and is compatible with the voltage, power, and frequency requirements stated on the rear panel. Do not attempt to defeat the safety ground connection. Debido a la cantidad masiva de partes bajas disponibles, usted tal vez quiera retroceder los bajos a volúmenes altos. 6 MEDIANOS BAJOS tiende a impartirle una característica mas "gruesa" o "llena" al sonido. 7 MEDIANOS ALTOS determina el que su sonido resulte "aspero y penetrante" o "distante y amortiguado". 8 AGUDOS controla el rango superior de frecuencias y anade brillantez al sonido. 9 BOCINA EXTERNA es para conectar el KX15 a una bocina externa. 10 AUDIFONOS se permite sesiones de practica en privado. La bocina interna queda desconectada cuando se esten usando los audifonos. 11 DIODO LED DE PRENDIDO brillara la palabra "ON" cuando usted encienda el KX15. 12 ENERGIA es para prender y apagarlo el amplificador. PANEL POSTERIOR 13 CABLE DE ENERGIA Este cordon de potencia, con tres

conductores, para servicio pesado, y conectado a tierra, se debe conectar SOLO a un receptor de CA de 120 volts, 60 ciclos, que este seguramente cableado y conectado a tierra. Si su KX15 fue adquirido fuera de los Estados Unidos, vea el panel posterior de la unidad para conocer su potencia de diseño y siga las pautas arriba señaladas. NO INTENTE pasar por alto la conexión a tierra de este cable! ADVERTENCIA! No use los audífonos en el enchufe hembra de altavoz alargador. El resultado puede ser daño permanente al oído. Etre certain que ce cordon se branche cor rectement sur une prise de courant de 120 volt, 60 Hz CA sauvement a la masse avant l'utilisation.

Si le KX15 a été acheté au dehors des États-Unis, voir la face derrière pour le régime de puissance de cet appareil. Pour votre protection, ne pas essayer vaincre la contact de terre du cordon. AVERTISSEMENT! Ne pas utiliser un casque d'écoute dans la prise pour un haut-parleur auxiliaire. La surdité peut résulter. Crate continuellement développe nouveaux produits, ainsi que améliore les existents. Por esta razón, las especificaciones e información incluidos en este manual están sujetos a cambios sin previo aviso. Crate développe continuellement des nouveaux produits, ainsi que améliorer ceux qui existe. Pour cette raison les spécifications et les informations dans ce manuel peuvent se changer sans préavis. [www.crateamps.com](http://www.crateamps.com) The KX15 is covered with a durable black Tolex material wipe it clean with a lintfree cloth. El KX15 está cubierto con un material durable Tolex límpielo con una toalla seca. Essuyez cette matière avec une toile propre et sans charpie. Ne pulverisez jamais les agents de nettoyage sur l'appareil. This rugged amplifier delivers serious clean and distorted sounds through its premium 12" Crate Custom speaker. Please check your inbox, and if you can't find it, check your spam folder to make sure it didn't end up there. Please also check your spam folder. The BFX100 offers a wide selection of digital effects designed especially for the bass guitar, each of which are easily accessed with a simple turn of a control knob. No programmer's degree required! The BFX100 boasts an improved cabinet design with a front port, an extended range bass driver, an extremely clean power amp and very flexible tone circuitry. The balanced line out jack has a level control for the best signal match to a recording console or live PA system, and is selectable for either pre or post EQ. The built-in limiter ensures pure, clean power even at its full 100 watts output.

An effects loop, a headphones jack, and an extension speaker jack add to the overall versatility of this incredible bass amp. Extensive testing at the hands and ears of skilled technicians and musicians ensures you that this amplifier is the absolute best it can be. The sliders control the output of the frequencies indicated below each control. The center position of each control is flat no boost or cut. This is an indication that the limiter is keeping peak signals from clipping the output. Otherwise, the amp will have a fault occurring, probably in the output stages. You should refer this type of fault to a repair guy that knows HiFi. Image of connector on amplifier Login to post Sometimes they rattle when the voice coil gets hot and warps but, sometimes the blow out completely and make no sound at all. The OM is at least good enough with the block diagram to allow it to be serviced easily enough. It would be about as loud as a typical boombox when at safe levels. If you need louder than that, you need a bigger unit. If the volume always is strong after letting it rest and cool and then fades as you drive it hard, this is the probable cause. When that speaker is disconnected, noise stops. What is the suspected problem If the speaker rattles while you are sending audio through it, it is likely damaged. It should be inspected as there are several failure modes, some of which as hazardous to your amplifier. First test is to gently move the cone and listen for any rubbing of the voice coil. If you hear rubbing, then the speaker needs replacing OR reconing. Sometimes the magnet breaks off the back of the speaker. Investigate this before further use. I SUSPECT that the resistance element in that pot is cracked. This is common if the knob sustained a hit. Replacing the pot is the only cure if the element is cracked. Reviewing the schematic, ALL audio passes through the wiper on the HIGH tone pots. If the wiper is intermittent, so will be the sound.

If your unit is solid state amp, the pot looks like a 10K ohm LINEAR taper. If you have a tube type,

then the pot is a 250K ohm LINEAR. Note that the other tone pots in the units are AUDIO tapers, but the high is a linear taper. Get repair parts from either DigiKey.com or Mouser.com When I turn it on it fires up fine. When I switch the standby on I get a loud whistle sound and can hear a humming from the speakers. I can also get a low guitar volume. These jacks cause a lot of problems. The switch passes the signal through if there is no plug for an effects in the jack. You can SOMETIMES tighten up the contact to restore the jack. You have to disassemble the unit to get at it of course. We will diagnose your unit for free and give you an estimate in a 48H maximum period. Answer questions, earn points and help others. It is all there and has each step checked off as the person assembled it. There is some wear but is all readable and intact. This will ship in an envelope at an inexpensive book rate.
