Sick of washing taking days to dry and having it hanging all over the place. Its going to be put in one of the cupboards under the work top so only have to have the doors of the cupboard open when it is on. If anyone hears of anyone selling one whether its the old electra or one of the newer models let me know. Anyone any experience with these dryers. They seem to all get good reviews. Do they have to be vented. Some reviews have said they dont which is good as I love the smell of fresh washing drying in a dryer. Seen an old Electra on ebay. I believe it was the first link, it even has a dark fascia which I like! Theyre quick, quiet and well suited for laundry for one or two people. You may also find surfaces get covered in a fine layer of fluff if you dont use the hose directed outside. Of course, it all depends how much you dont mind ironing as to how careful you are. It was then passed on to my great aunt and is still in use see pic below of the same model. Theyre also still made in Britain at the old Hotpoint plant. Theyre pretty basic, but Ive found with dryers that the more basic, the better. Having said that, my Aunty Eileens will hold a double duvet set with ease and dry it in an hour. Failing that our method when living elsewhere was to push the hose so far out of a third floor kitchen window air currents carried the exhaust away. Thankfully the kitchen faced a courtyard thus either no one noticed or at least cared. The compact size, light weight, and simple operation of this machine will certainly appeal to flat dwellers everywhere. If you are happy with that then by all means carry on. <http://www.forumsa.cat/imatges/canon-5075-manual.xml>

- **1.0.**

Either one goes with some sort of condensing system or deal with hot and damp lint laden air flowing from the dryer. Suppose it would be possible to reduce the amount of fine lint to nil, but that would require filters along the sort of HEPA types. The typical fine mesh screen just wont do. One of the great things about these compact dryers is that theyre so easy to move about. Because she had a Hotpoint Twin Tub and no plumbing in her kitchen for an automatic washer and dryer, the dryer was usually kept in the pantry and simply wheeled over to the kitchen door when in use on wash day. As stated previously, my Nans Creda was purchased in the mid 1980s. This style has gone under various names since then Creda, Hotpoint, Electra, Carlton, Indesit just to name a few. I know of many people who had these style of dryers over the years and never complained of lint being spewed out. I even notice the difference when I use my condenser dryer without its condenser box more fluff on surfaces! The dryer seems to work better without its condenser to be honest, or at least it doesnt run so hot, which is a good thing on the whole. I would, however, consider a full size vented dryer if space permits. I have mine in the bay window in the bedroom, once the curtains are shut I cant be seen, but if space is a problem then the dryers you have mentioned are great. Lord knows when that will be. Need to sort soon! They are very speedy as well, especially for cotton sheets and towels. My uncles late 1980s Creda Debonair dryer like the one on reply 3, just a little newer, can dry three bath towels straight out of a 1200rpm Indesit in less than 50 minutes. My Hoover Dryer De Luxe hasnt got a vent hose, it just has a nozzle screwed onto the back to aim the air up. There are no specifics here about venting dryers as there may be in the US. I think you are getting confused with Hotpoint dryers. Hotpoint had a similar arrangement too albeit elliptical in shape. <http://www.latgalesamatnieki.lv/files/how-to-manually-stealth-patch-xbox-360-games.xml>

registration. May be help you to repair. You could suffer a fatal electrical shock. Instead, contact your nearest service center. Note! Your Dryer does not blow moist air into the room, avoiding the requirement of a vent hose. Position the Dryer where air can freely circulate around it, a 15mm gap each side is recommended. HINGE DOOR CATCH DOOR LATCH HINGE Door Reversal The door of your Dryer is reversible and can easily be changed InstructiItem can be used in Dryer. Dry at high heat setting. Do not use in Dryer. Dry on low heat setting. The majority of fabrics today can be dried in a Dryer. There are however certain fabric finishes which need to be dried away from direct heat. Items not suitable for your Dryer. Items containing Rubber or Plastic Items which have been dry cleaned. film, e.g. pillows, cushions, PVC rainwear. Woollen articles. Inflammable artiIt is important to extract as much water as possible from each item before drying. This reduces the drying time, energy consumption and the

running cost. Maximum Dry Cotton fabrics max. 6 Kg 13.2 lb Load Size Synthetics, eg Polyester, polycotton max. 3 Kg 6.6 lb Acrylics max. 2 Kg 4.4 lb Note Manmade fibrBedspreads If you have difficulty getting them into the Dryer, the machine will have difficulty drying them properly as they expand when drying and prevent air flow through the Dryer. This can cause the appliance to overheat. Blankets e.g. Acrilan, Courtelle, Dralon and Orlon must never be over dried. Such acrylic fabrics should be dried with care on low heat Plug the appliance in. Switch on at the wall socket. 2. Open the Door by pressing the Front panel as shown. Ensure the fabrics are pushed towards the back of the Drum and away from the Door seal. 4. Always check the following FLUFF FILTER is clean and in place WATER CONTAINER is empty and in place CONDENSER is in place 5. Close the Door. 6. Select the required heat All of our Dryers have an energy saving feature which reduces the heat input when the temperature in the drum reaches a predetermined level.

Timed Dryers Select the required Drying time by rotating the Timer TIMER control clockwise up to 120 minutes just past the CONTROL required time, then anticlockwise to the desired tiAs an approximate guide, the following table may assist you. The times shown include the cool tumble period, in minutes. The Kg weights specified are fabric dry weight Remove plinth moulding where fitted by slightly lifting and sliding to the left. Remove the water container and empty after EVERY programme. Failure to do this will result in the water container becoming full and the load will not dry. PLINTH MOULDING WHEN FITTED NOTE The light on the control panel only comes on when the water container is full. When the light is on you should stop the dryer Refer to rating plate for the supply voltage. Warning This appliance must be earthed. Changing the The flexible mains lead is supplied connected to a BS1363 fused Plug plug with a 13 amp capacity. If this plug is removed or cut off, it should be properly disposed of and not left where children might find it and plug into a sAfter each load Turn the Drum by hand to ensure all items have been removed. Clean the Filter by rinsing under the tap or using a vacuum cleaner. Empty the Water Container. Every week Wipe the drum, the front of the condenser and the door seal with a damp cloth. Every month Remove Condenser unit and clean any buTHERE MAY BE NOTHING WRONG LOAD IS NOT DRY OR TAKES DRYER WILL NOT START LONGER THAN NORMAL TO DRY CHECK THE POWER SUPPLY CHECK THE FOLLOWING Has the fuse blown in the plug or the Does the fluff filter need cleaning. If there is a problem with your appliance then contact your Service Centre by using the table below to identify the appropriate phone number.
