In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyses reviews to verify trustworthiness. Please try again later. Vijay 5.0 out of 5 stars I then had to tell Windows where to find the.INF printer driver file on my hard drive.

This is how I was able to finally get this device to work with Windows 8.1.Sorry, we failed to record your vote. Please try again The good news is that I got it to function. The bad news is that it wasn't particularly easy or straightforward. I knew I was in trouble when I opened the box and saw that the documentation was dated 2003 and was all for Windows XP. I guess that it never occurred to DLink that someone would want to use this gadget with a modern operating system. DLink can't be bothered to update its web site. I tried to follow the Win XP instructions, which included changing the IP address of my computer. That enabled me to see the DLink print server, but cut me off from the Internet. Not a good idea. In a final act of desperation, I called DLink tech support, not expecting much. Then, a miracle occurred. In not too much time I actually got through to a real person who could speak English and who actually knew what she was talking about. If not, it's a mess. There were no instructions anywhere for using this with a Mac machine, but I managed to muddle through. So I wasted more time than I ever imagined but it at least everything works. DLink could have saved themselves some tech support time and could have saved me some aggravation if they had taken a few minutes to update their documentation to the 21st century. But I guess that's too much to ask. I'll certainly think twice before buying something from them again.Sorry, we failed to record your vote. Please try again It was up and running in less than 15 minutes. However, I am familiar with network protocols and addressing schemes, and I can see where those without such knowledge might have problems. The default IP address for this device is 192.168.0.1, and all computers on your network must share that IP scheme to use the printer connected to this print server. In my experience, most routers wireless or wired use a default IP address of 192.168.1.

<https://congviendis.vn/vi/el-512s-manual>

1, so the IP address for the print server will need to be changed. Note the next to last number in the IP address is preset to zero; it must match that of the existing network in my example, the number 1.

The included instructions guide you to accessing the print server device a few hoops to jump through but once you're there you can easily change the default IP address and you'll be able to access it directly in the future. Be sure to follow the directions exactly when creating the new printer port on your computer, particularly where you have to define the LPR Queue name. My network consists of WinXP and Win2000 machines. Sorry, we failed to record your vote. Please try again. The thing has run like a champ and is the most economical solution for printing black and white in a home environment. I thought I was going to have to let it go as our home network has grown and I no longer had a dedicated PC I could share it through on the network. This little gadget has just extended the lifetime of that printer. This has allowed me to connect the printer directly to the router and allowed me to share it without a dedicated PC. Set up was fairly easy. The help provided on line was necessary to get it to configure properly and set up each PC. Sorry, we failed to record your vote. Please try again. Easy to set up. Tried a different one that was horrible. Has a web interface to manage the set up. Sorry, we failed to record your vote. Please try again. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. The bad news is that it wasn't particularly easy or straightforward.

My network consists of WinXP and Win2000 machines. Please try again later. Please try again later. David J. Donlin 5.0 out of 5 stars The thing has run like a champ and is the most economical solution for printing black and white in a home environment. I thought I was going to have to let it go as our home network has grown and I no longer had a dedicated PC I could share it through on the network. This little gadget has just extended the lifetime of that printer. This has allowed me to connect the printer directly to the router and allowed me to share it without a dedicated PC. Set up was fairly easy. The help provided on line was necessary to get it to configure properly and set up each PC. Please try again later. Please try again later. Thom 5.0 out of 5 stars Easy to set up. Tried a different one tlink that was horrible. Has a web interface to manage the set up. Please try again later. Please try again later. Jeff Z 5.0 out of 5 stars It is equipped with a parallel port only and the computer I wanted to use it with was going to be on the other side of the room near the network switch. This product worked perfectly. The only problem you may encounter is when your network doesn't follow the default IP scheme that is preprogrammed into the unit. That was the case with my setup I had a block of IPs that I had to use on my work network. If you did everything right, you should be able to get into the web app. If you can connect to the print server through the web app, you're ready to move on to the printer setup outlined in the instructions.

It went smoothly for me the first time and has worked flawlessly for a few weeks. Also, it fit perfectly in the spot that my HP has the printer port located. It's actually inside the printer under a nice cover. That is actually nice because it protects it from getting knocked around in the back. It's a pretty small unit so it should fit fine in most printers. Please try again later. Please try again later. Lee Duncan 3.0 out of 5 stars It allows me to connect my Mac and Linux laptop to my HP LaserJet printer. The unit does generate some heat, though, so I don't feel comfortable leaving it on. It could use a power switch to make shutting it off easier, or perhaps a lowpower mode when not active. I would also like to see the ability to mount it on the wall. Because of its bulk, it cannot connect directly to my HP printer, so I had to use an extender cable, and now I just have cable and Printer Server sitting on the back of my desk. Please try again later. Please try again later. Octavio Nino 5.0 out of 5 stars I bought it because I want to use a cheap HP Deskjet 695 that a customer gift me, specially for my girlfriend and her university friends which comes to the house for print a lot. Please try again later. Please try again later. Ken Miller 4.0 out of 5 stars I have an old HP LaserJet 6MP from 1998 that's still a great printer, but I had no easy way to hook it up to a PC and several Macs. This tiny thing makes it work as a network printer. My only complaints are sometimes it stops working and needs to be unplugged and replugged to reset it. Also this is the second one I've bought. The first one lasted 3 years but died. Overall, though, this is a great way to keep an old parallel printer going. Please try again later. Please try again later. Charles L. 5.0 out of 5 stars Please try

again later. Please try again later. We delete comments that violate our policy, which we encourage you to read. Discussion threads can be closed at any time at our discretion.

Limited support will be available Supporting multiple networkNetwork connection is through aNDS. This gives you the flexibility to install the printYou can sendIn addition, Windowsbased menu drivenSNMP and latest MIBII MIBs are built. When you reboot something you are simply cycling the power to the device. When you reset something all the settings are restored to how they were straight from the factory. You may have trouble logging back into it if you dont know the defaults. Hopefully this guide will help you through some of this. To access the interface you need to know the print servers IP address. For the default IP address check out our Login Guide. If you have changed it and dont remember it dont panic. Use our free router detector software to locate it. Then in the left sidebar click Reset. The top one is simply a reboot. Where do you find these. We have them for you in our Login Guide. Check out all our different guides for this print server at the bottom and top of this page.
