Got it last night, fired it up and oh my god, my images are distorted to death. I do model shoots and every image looks fat and short. I probably should have expected this on a 169 monitor but there are no manual screen adjustments so I cant narrow the view.

Before I decide I blew it, can anyone tell me how to adjust the settings or do anything else to give me correct views of images. Thanks in advance. A 16x9 monitor doesnt distort your images if the resolution is set correctly. It sounds like your resolution is set incorrectly. What OS are you using. Do you know how to change the screen resolution. Do you know what the native resolution of the screen is I do model shoots and every image looks fat and short. Before I decide I blew it, can anyone tell me how to adjust the settings or do anything else to give me correct views of images. Thanks in advance. Your OS should have auto detected the new monitor and adjusted the resolution to 1680x1050. FYI. with LCD monitors ALWAYS display at the native resolution otherwise you will not have the sharpest possible image and you will possibly see anomalies like jagged edges. It could be your video driver needs to be updated if our system is really old and this has not be done for several years. Id start with the graphics settings and adjust the resolution as Pupator suggested. Can you tell us more about your hardware make, model, age, OS, etc. Do you have a hardware calibrator. Im using XP SP2 totally updated. The onboard video supports 1680 x 1050 and thats where its set. Colors look just fine. However, reading over the manual it appears theres another setting I need to find. If the monitor itself isnt set to 1610 never mind the windows resolution than I could see the distortion problem occurring. Ill try that tonight and hope it helps. Thanks again. Press power button when holding those buttons down. Make sure you record the default for any setting before changing else you may be get to a place from which you cannot recover.. It actually makes me feel pretty much like an. In dxdiag, I Id the video set as an S3 Unichrome IGP. Since its a legacy, they appear to not update drivers for it and I guess I cant blame them. So at this point it appears likely that its a

hardware issue and Ill be taking a look at video cards. Im a photographer, not a gamer, so it shouldnt cost me all that much to get 1680 x 1250. Any suggestions. Im pretty tech savvy on the box itself and the software but Ive never had much cause to play with the monitors. Now I do. Thanks again. Since its a legacy, they appear to not update drivers for it and I guess I cant blame them. From what youve stated it sounds to me like you have a system with the GPU built in to the motherboard and it is only about 4 years old. If it is that young. Installing the Dell driver may force XP to recognize the monitor. As to video cards, if you have an empty AGP slot, those cards are getting few and far between. You may even find one in the junk bin of your local computer repair shop. Google it and doublecheck, but its not like that resolution is particularly high. Windows recognizes the monitor just fine but doesnt offer 1680x1050 in Properties. Pupator Will do. Thanks. FOLLOWUP TO PUPATOR It appears from all forums I saw that VIA S3 Unichrome IGP cannot be upgraded to support 1680 x 1050. Ill take a look at the BIOS tonight as a final shot but I doubt that will solve anything.

Im working at 43 right now but since Im upgrading the computer as soon as Win7 goes RTM in October, Ill probably just settle for that for now since Id need an AGP interface which would immediately become useless in a PCIe machine.
