It is possible that updates have been made to the original version after this document was translated and published. Veritas does not guarantee the accuracy regarding the completeness of the translation. You may also refer to the English Version of this knowledge base article for update information. You can click on Install Patch and

select the OS that you wanted to deploy patches to. While systems running on Windows and Mac OS do not have any preconditions, certain Linux distributions necessitate the below requisites From the patch browser select the patches that have to be applied.<http://www.kspu.or.kr/file/userfiles/bq-395-manual.xml>

The patch browser has an option to view the missing patches or all patches, which can then be filtered based on the application and service pack. If you have reached this configuration page from the Patch Management tab by selecting the patches, the selected patches automatically gets added to the List of Patches. The patches will be installed based on the Install Options selected after the scheduled time. The Start Time can also be greater than the End time in such cases, the End time is assumed to be on the following day. For example, if you wish the deployment should happen between 10.00 PM and 4.00 AM, you can specify the Start Time as 220000 and End Time as 040000 Specify the time within which the client machines will be rebooted and the message that has to displayed in the client machines. Specify the time within which the client machines will be shut down and the message that has to displayed in the client machines. Specify the message that has to displayed in the client machines. The deployment will be initiated during the next system startup. The Detailed View will list every missing patch against every single computer in a separate row, which means if a single patch is missing in 5 computers, 5 rows will be listed. Creating a configuration based on the above selection will work as follows Patch 2 is applicable for computer 1, but you never intended to deploy it, however, the deployment will happen on it since it is a missing patch. If you want to deploy multiple patches for multiple computers, then it is recommended to create multiple configurations or initiate deployment from Missing Patches View. If you are managing computers in a remote office using a Distribution Server, then WAN agents will download the applicable patches from the Distribution Server.

The deployed patches will be replicated to the Distribution Server only for onpremise irrespective of whether the patch is applicable for the remote office computers or not. Please choose from the relevant download links below and be sure to get the correct version. Retail boxed game Patch 1.06 June 4th, 2013 Patch 1.05 April 18th, 2013 Patch 1.04 March 13th, 2013 Sorry that didnt help. Please submit a support ticket and tell us how we can help you.
