To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Login to post When I play it back on the camera and after downloading to my computer, it plays as if its set for fast forward and theres no. A slow recording memory card will not produce your problem but will take longer to save the file. If you shot the movie in PAL and played it on an NTSC TV, the picture would be in black and white with no sound and vice versa. ALWAYS format the memory card in the camera, never on a PC Then press the shutter to record and press it again to stop. Just make sure your cameras memory either internal or external is enough. For other setting like resolution and frame per second FPS you may change it on the Menu. The bigger number on FPS meaning the video become more smooth but it take a lot of memory. So here goes. When I did the research on the M Digigr8 digital video camera I found more bad experiences than good. You can visit PCreview to check out some user opinions. It is ok when used as a camera but for photo enthusiasts it is lacking in features. The Webcam is probably the most adequate feature. Select Your Operating System, download zipped files, and then proceed to manually install them. Recommended if Radioshack Digigr8 3 In 1 Digital Camera is the only driver on your PC you wish to update. Password Don't have a password. Please register, and get one. The drivers from the other companies webcams do not seem to work either. I have looked through the download directory of sonix to try and find the correct install file or driver file. All of these drivers have the same error with SP2. Are there any known drivers other then the ones for XP SP1 or Linux. I have tried all of the above approaches to find a driver. Hopefully I can get this thing to work or it will be the first waste of money one Woot.

If they can contact the source for these cams and ask for an updated driver, that might fix the issue, otherwise they will need to issue a refund. I don't want a product that's not supported. Cheap yes, but it's not worth two cents if it don't work. With one of them I got the aforseen "It recognizes as an Unknown USB Device under Windows' device manager" error. So I figured what the hey, let's see what happens with the other one. The SECOND camera was recognized by Windows XP as a camera, but as it installed the drivers, i got the aforseen BSOD error. As for now, I'm giving up, but I'll check back tomorrow to see what the other woot minions have figured out. I have determined that there are no drivers, that I can find, that will work with Windows XP sp2.From that point on the Device

Manager reports the camera as an "unknown device". Any attempt to upgrade the driver fails. Some attempts even hang the Device Manager. I would prefer to keep them, rather than return them to WOOT. I hope WOOT people read these posts and reveal an unknown driver that will make these work, otherwise I will be forced to return them. Is there some way to remove that initial installation so I can try again from scratch I like this thing. very decent picture quality too Mine worked the first time for about 2 minutes then stopped. Now I keep getting the wonderful "USB Device Not Recognized" blip. Let us know, they are about to have mine shipped back really fast. That is unless I throw it against a wall first. That or maybe it works better with SP2. I am running XP Pro SP1 with all updates, save SP2 and it won't work anymore. Just get the darn USB Malfunction error whenever I try to reinstall it. Thanks. I'll let you all know what they say. I hope you all do the same! A fluent visible telephone of far distance can be obtained through Internet after user end software is installed." It was toy grade, and I found it to be of no real use, even when I got it to work. Although it seems to have been put to use as a webcam for use with Skype. It had very basic english instructions on plugging the battery in and the USB mini cord that came with it, nothing about drivers or anything. There was a mini business card form factor cd that came in the blister pack that had a software package and drivers. I could not find a source for those files, and that CD is long since gone. If that is the case, the original manufacturer is likely not in business anymore. I did not see the Bluetech name in the search results I surveyed.
