Chapter 10 From the figure shown below we obtain From the figure shown below we obtain A oeAo e o Consider the input. Hence, the system is linear. Hence, the factor of 2 Since there is no output before the input hence the system is causal. Since there is no output before the input hence the system is causal. Here, a bounded input produces bounded output hence the system is BIBO stable too. Since there is no output before the input hence the system is causal. Here, a bounded input produces bounded output hence the system is BIBO stable too. Also following an analysis similar to that in part a it is easy to show that the system is time invariant. Since there is output before the input hence the system is noncausal. Here, a bounded input produces bounded output hence the system is BIBO stable. The system is linear, stable, non causal.

Hence the system is time varying. The given system is linear, causal, stable and time invariant. Hence the system is linear. For a discrete LTI system From the results of Problem Hence for the given sequences Hence in this case the problem is again Here, again an interchange of Hence for the convolution to be associative, it is sufficient that the sequences be stable and Generalizing the above result it can be shown that for an Nth order causal discrete time Hence a single input, two output difference equation is Substituting the above in Eq. 1 we get Hence the inverse system is characterised by the difference equation From the figure shown below we observe Hence the impulse response is given by To determine these coefficients from the impulse. To illustrate the method, without. Writing the last three equations in matrix form we arrive at Thus, the difference equation representation is given by From the solution of the previous problem we observe that the complementary is of the. For the given initial conditions we thus have Thus Now, Type. Type. Type Type. Type. Type Real part The displayed output is. Square root of alpha is For example, for a length Chapter 3 2eX 2 e j is the square of an odd function, they are both even functions of . Hence, X e j is an even function of .
