When you do, pleasewrite to us and tell us how you are using this new development. With feedback from the performerswho arecreatingmusic with our products,we can continually improve on the features that we can offer to You. Thank you for making the Harmony Machinepart of your musicalequipment.CONCEPT OPERATION OF The Harmony Machine will produceone or two harmonyvoices which follow your playing. The harmonynotesare realistic sounding,and are determined the carefully programmedfactory by presets four musical stylesRock, Blues,Jazz andCountry. The Harmony Machine has44 different diatonicpresetharmonyscales,12 chromaticparallel harmoniesthat work in any key, and 8 detunemodes.Using the includedFS304footswitch and the Harmony Machinesspecialrandomaccess feature,you can switch betweenpresetscalesand change keys instantly while performing,to cover shifting harmonieswithin a song.

HM4 HarmonyMachineOperationManual I, F Play at the volume that you will be using, ADJUST and adjustthe control so the gfeenLEDs are on most of the time, and occa sionalpeaksbarelylight the red LED. TUNEUP TO The Harmony Machinerecognizes pitch of the input signalthat you are the T H EH A R M O N Y playing. For accuratetracking,spenda moment to tune your instrumentto the M A C H I N E Harmony Machine.Pressthe TUNING button on the front panel for aboutthree seconds, then play a note. The Harmony Machine will display the note and name.When the two moving LED segments both vertical and stable,you are in tune. Seethe Basicssectionon Tuning, and changingthe Tuning refer ence. FACTORY The Harmony Machinepowersup into the Rock Bank, Harmony 1, which is a PRESETS chromaticharmony,and works in any key. To use other factory presetharmo nies, selectthe desiredpreseteither from the front panel,or with the footswitch. Seethe Basicssectionfor detaileddescriptions the front panel and of footswitchoperation.STARTPLAYING There are plenty of presets that work perfectly without you having to set the key that youreplaying in. Startwith any of the Chomaticpresetsseepage6 for the presetlocationsand startplaying melodies.Set the SETTING KEY KEY to the root name of that chord, i.e. if the first chord is an E, then pressthe KEY UP button until it displaysE. If the first chord is A Minor, then set the KEY to A and chooseone of the Minor presets.Usually, you will only have to set the KEY once at the beginningof every song. The Harmony Machinewill rememberthe KEY settinguntil you turn it off. You can set the key from the footswitchor your instrument,as well as the front panel seethe Basicssectionon RemotePresetand Key Change.If it soundsgmd, use it. H A R M O N I E SHM4 Hannny MachineOperation Manual This is the harmony style of non OR PARALLEL intelligent pitch shifters,but the Harmony Machine deliversa much better soundquality.

M INOR Theseare SmatHarmonies that nt within the key that you specify. These provide

musically correct harmony that sounds great in Blues and Rock tunes in minor keys, and over minor chords. DOMINANT 7TH Smart Harmonies for use in Blues, Rock, and over dominant or flat 7th FLAT 7TH chords. MAJOR These Smart Harmonies work well in all styles over major chords. This is the vocal harmony style most often used in popular rock. DETUNE Gives varying depths of a shimmering, non-repeating chorus or doubling effect. These are usable with a polyphonic, or chordal input. The lines lie flat on the bottom when there is no signal, and will be straight up and parallel when the input is perfectly in tune. If your note is flat, the lines will go to the left, and if you are sharp, they will go to the right. If your input signal is overdriving the Harmony Machine, they will go horizontal on the top of the display. If this happens, turn down the INPUT LEVEL control on your instrument. When using the tuning function both the Harmony outputs are muted. This allows you to check your tuning on stage without being heard. MH HH Overdrive fffffiH fffffiH Fur TUNING DISPLAY Sxanp lru Turue T U N I N G O Sometimes, you may want to tune to other instruments, then retune the OTHER Harmony Machine so that all your harmonies are in tune. You can do this by INSTRUMENTS. The new tuning reference will be displayed on the PRESET and KEY LEDs when you are not playing. To leave TUNING mode, just tap one of the BANK keys. HM4 Harmony Machine Operation Manual 1.1 From the front panel serial access. In STEP mode using the footswitch serial access THE SETTING. In PLAY mode using the footswitch and your instrument random KEY access. USING THE FRONT When you turn on the Harmony Machine, its default setting is Rock 1, PANEL KEY C. Use the PRESET UP and DOWN keys to select other Presets in that Bank. If you hold the PRESET UP or DOWN key or the PRESET footswitch down, the preset numbers will scroll by rapidly, and then wrap around the beginning again.

<http://elipsradiologiadigital.com/images/Devil-May-Cry-4-Ps3-Manual.pdf>

Press the BANK keys to select other Banks. U S I N G H E STEP mode is the way that the Harmony Machine will operate when it T FOOTSWITCH comes from the factory. In this mode, the Footswitch PRESET and IN STEPMODE KEY switches work like the front panel PRESET and KEY UP keys. If you tap the switch once, the PRESET or KEY will advance by one setting. PRESETS advance by 1, and the KEY settings progress through the Cycle of Fifths. If you step on the PRESET or KEY footswitch and hold it, the PRESET or KEY display will go backward one setting; you should release it now if you wanted to go back one step. If you continue to hold it, the display will start to scroll forward through the settings rapidly until you release footswitch. The Harmony Machine will remember the footswitch modes until you change it back, even if the Harmony Machine is turned off. PLAYING TO Now, when you want to change the Key, just step on the KEY footswitch and SELECT THE hold it. Play any note on your instrument, and the Harmony Machine will be NEW KEY. You can use this feature to change Keys quickly as you play, by just briefly tapping the footswitch while you sustain a note. OR PRESET To change Preset and Bank, you will step on the PRESET footswitch in the same way, and then play a specific note on your instrument. For guitar, the PRESET is selected by playing the 1st string High E. The fret number corresponds to the PRESET number it will change to. Other instruments can also play the following concert pitches. VIA MIDI channel will control Preset selection according to the following. This allows you to change HM4 presets from a sequencer, a master or MIDI controller. HM4 Harmony Machine Operation Manual The Harmony Machine Smart Harmony operates NOTES on single notes, so avoid playing chords or double notes except in DETUNE functions. Or try two notes at once for strange sound effects who knows what you might come up with. Use the Output Mix knob to balance straight and Harmony signals.

<https://elitesoftsolutions.com/images/Devil-May-Cry-4-Manuale.pdf>

Try applying different signal processing to the split Harmony 1, 2 and Unshifted Outputs. The Harmony Machine responds well to harmonics and muted strings. Unison and open fifth harmonies are great for soloing and string voices. Experiment with the effects of pitch bend and pitch envelope controlled patches. An Octave up harmony mixed into the background adds realism to single line string

section patches. The DETUNE is gorgeous fattening up polyphonic for strings and thin FM patches. DETUNE can enhance realism of the synth piano patch by simulating the inharmonicity of the upper partials of a piano string. HORN S Gives you a sectional sound that plays along with your improvisations. Octaves are nice for doubled solos when you already have a band playing dense chords behind you. Vocal sounds and wordless vocals are fabulous, as are Doowop style grooves. Distinct lyrics are best kept to close, lower harmonies. HM4 Harnnny Machine Operation Manual Now customize the name of a clipboard to store your clips. EASY TO USE ROBUST PROCESSES GROWS WITH YOU The new DigiTech. The newly developed DigiTech control system pursues new methods of surface technology. For the first time in the history of electrostatic powder coating, a wide range of users are given access to a high degree of automation and at the same time the operator guidance for the user has been designed to be consequentially simple and functional. This is made possible by the modular system which cannot only be individually matched to the respective task but also flexibly grows with the requirements. Prices are indicative only and may vary by country, with changes to the cost of raw materials and exchange rates. Power supply not included. Now, you can rack your whammy without losing the cool encoder scrolling sound Plug your Midi cable from Pitchy to Whammy, connect your expression pedal. You may need to calibrate it, then you are ready to use Pitchy and have fun. You will have to set this preset number to the PitchFlex algorithm according to Pitchy notice.

You will need to set Expression pedal to Midi PitchBend. Once the settings achieved you will not need to touch it anymore. Pitchy fixes the well known problem of step sensation while pushing the expression pedal. Movments are perfectly linear without any step. You can also replace it by using footswitch in Ricochet Mode the up and down speed are adjustable. If no expression pedal is plugged, Pitchy sends max value very cool for players who don't want to use an expression pedal or a small rig. The expression pedal is still sending Midi data when Pitchy is off. That means you don't need to use a specific expression pedal for Pitchy if you already use one for your H9. Here is how works the Ricochet effect. Leds represent the expression pedal position. Speed up and speed down are customizable. If you're a Pink Floyd fan On the run Dark Side of the Moon or Muse fan Map of the Problematique Black Holes and Revelations you know how cool can be a sequencer. If you don't understand, the Pitchy sequencer will change the Pitch every step. If you play 1 note, you will hear a melody of 8, 12 or 16 notes according to your preset choice. The switch encoder hide a Tap tempo from 30 to 500 bpm. You can also synchronise the tempo thanks to external Midi Clock in Midi input. It means that the same preset can be playable by DigiTech Whammy4, 5, Bass, DT or Eventide H9, Pitchfactor. Pretty cool right No problem for other Whammy or H9. You can edit a preset and try it before storing. Its easy and funny to edit. The result is very inspiring. With a Boss ES8 you can use the output EXT CTL EXP1 to keep your main expression pedal plugged in the ES8. Actually the output is now Midi Thru so it will be easier for complex rig with a main midi controller. But that's not the only feature, just look at the crazy things that are possible now Combined with the Pitchbend you can write any sequence you want as long and as crazy as you need.

J'ai juste installé un bouton stompshield comme sur mes autres pedales, pour éviter le coup de pied malencontreux qui pourrait soit occasionner une manipulation indésirée, ou une destruction du potard de réglage en live; Bonne continuation, Bruno Save time, money, space on your pedalboard and tap dancing in live performance. The Pitchy already contains all the preset you need and beyond for your H9 Whammy and Sequencer. Incredible tiny pedal who offers so much, why live without. Thanks to the ingenious and generous Franck Graziano for all the features of this impressive pedal. Our set up is 2H9s 1Pitchy 1Evenmidi controller. Somehow they all talk over midi. Build quality is great. Support has been good. I asked a few questions and got immediate response. You really need an expression pedal to take full advantage of all of the features related to the whammy preset. If you read the manual it makes sense to control. So I would recommend to read first then it's pretty simple. It has a lot of sequences preconfigured, but if you really want to get your money's worth learn how to

program your own. Even simple sequences at slow or fast speeds can produce cool effects.
