How do I connect my boston acoustics BA735 digital speakers to my dell computer. Submitted 8 years ago. You will need to look in the manual what color the line out is, John jjtv4 There is no USB on the sub. It will be D shaped not flat, like a printer Customer the terminal that operated the dell speakers was the light green I believe. I will have to hunt down the manual, will take time. But the BA system was working on a gateway older computer and the dell speakers were working fine until I gave them away a few days ago. I will save this, John Customer I have usb connections on the computer, but the BA735 only has the dark green single probe connector jjtv4 Avoid light pink and try the light green Customer It is plugged into the light green jjtv4 Turn on do you have sound. Customer no jjtv4 Manual time jjtv4 Is the sound up on the computer You can always test with headphones to be shure. Also it appears the you think the the answer was sufficient so as to feel that I accepted this as ok. I did not accept. So we need to start again. Can we do that now. James jjtv4 Let me see if I can find a copy of your manual and I will give you the link too, John jjtv4 Can you click the speaker icon on the lower right tray, go to info or help and let me know what sound card it is. Also can be found in control panel. Customer John, I have solved this problem myself. With a online forum I found the answer, which was very simple. My computer has a digital jack for the BA735 system and all I did was change the output to digital only at the sound device manager. An expert should have known to look at this early or at least examined the settings. You did not.

While I appreciate the efforts you put forth I cannot say that the help you provided was satisfactory. Therefore I cannot pay for this particular service. Customer Please credit my payment back to my card and please be assured that I still plan to use your services in the future. Ask Your Own Consumer Electronics Question Was this answer helpful. My original remote is dead. When connected to speakers and receiver, music is playing, and the subwoofer is working, but it has a loud humming sound. I have a pair of Boston Acoustics Voyager 6 outdoor speakers. They are located under an eave so do not get a lot of snow or rain on them, but are uncovered over the winter. They have been sitting in the storage room for a few months but they should still work. Do I need to replace the speaker or can it be repaired. What do you recommend. I just got and synced a 32GB iPod touch. You can help protect yourself from scammers by verifying that the contact is a In trying to use these speakers with my Asus Windows 7 laptop, I understand that my laptop requires an analog connection.

The only cable I've ever used with these speakers was the supplied Are they RCA connections on both ends I always thought RCA requires two connectors white and red, for stereo, but there's More important, should this solution enable the speakers to work with my laptop, with its analog only output You can follow the question or vote as helpful, but you cannot reply to this thread. If the subwoofer supports RCA connector only, you need to buy a connector cable with 3.5mm jack on one end and RCA connector on the other. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer

Amazon Customer 2.0 out of 5 stars Please try again later. Please try again later. K. Nolette 5.0 out of 5 stars Please try again later. Please try again later. Gene Stallons 5.0 out of 5 stars I cant believe how good these sound for the price. This is the second set of these I own and if they fail I will get another. Please try again later. Please try again later. David Boring 5.0 out of 5 stars Every now and again, you find something thats works better than expected. Very infrequently, you run across something that performs so well you cant believe it. The BA735 speakers are the rarest sort of productone that performs not only out of its priceclass, but competes with home stereo speakers costing 20 times as much. These things are ugly. The cases are beige plastic, and the rounded surfaces make them annoying to stack. To look at them, youd think that they were the worst sort of crappy PC speakers.

I have no idea what it is that makes these little speakers so much better than any similar set Ive listened to, but theyre amazing. The highs and mids are welldefined and crisp. The bass is plentiful and reasonably punchy, though not as perfectly welldefined as a highend powered sub. For the size and price, they are unbelievable. Actually, at four times the size and price theyd be just as great. Get a pair. Seriously. Pump up your favorite reference material and be astounded at what comes out of these cheaplooking little monsters. There are at least two versions out there with the BA735 model number. One is digitalonly, and seems to be the most common type. It has an RCA jack digital in only. I plan on buying another set. Please try again later. Please try again later. O. Kwon 5.0 out of 5 stars I didnt know what I am getting, but just thought it would be decent speaker. After I connect with my iPhone, it blew my mind. I often checked the bose companion 3 system and like their clarity of speakers. And I hear the same quality sound with this system. OMG!!! 2 satellite speakers are very clear and subwoofer gives nice powerful bass. All together, it gives really nice balanced sound. I live in apartment dont have much of sound proof. So I cant turn the volume all the way up. But its half way volume, it sounds still amazing. Now I plugged in my 55 inch TV, and it gives new life to my big screen TV. Amazing!!!! I played movie, now I feel like I am sitting in the movie theater. One thing I am not favor of this is its design not like Bose platinum kinda feel. It does look ugly white cheap computer speaker look. But think that this model came out about 20 years ago. And it still sounds amazing. Please try again later. Please try again later. Nick 5.0 out of 5 stars I believe they came with an old desktop computer back in early 2000. Great sound and bass from just 2 speakers but I couldnt justify paying 240 total for PC speakers.

Also, there are 4 wires running from the the back of the right speaker. Very cluttery and wires running all over the back of the desk so that was enough irritation to take them back. A few weeks later I found these Bostons and remembered how great they were. Plugged em in and they sound ALMOST as good as the pricey Bose. Granted they have that little subwoofer unlike the bose but it has a very small footprint and will not get in your way or look overwhelming. I say perfect because the little subwoofer is not BOOMING nor quiet. Although not for rap, they are absolutely beautifully for all other types of music. Please try again later. Please try again later. Lionel Olay 5.0 out of 5 stars It was difficult at the time to find a sound card with a digital output so I just wrote them off as another fiddly reason Gateway went broke. but eventually I came to possess a sound card with the required digital output, which I havent used since these cards also have analog out jacks that I connected to my old stereo receiver and found the sound out of my system incredible. therefore I just ignored the BA735s until a few days ago, curious after reading the rest of these reviews I decided to hook them up but had to dig around a lot to find the power supply and a long enough coax cable but, my was it worth it. The sound out of these is outstanding. Now I dont have to power up the rest of my sound system when I want to listen to quality. I already knew the build of these speakers was top of the line, they have a heft, fit and finish second to none. The negatives are that digital input; fiddly to get hooked up and that old, dead, blah, PC white finish. which is why they can still be found at

bargain prices. They are the best sounding computer speaker set I have ever heard!.Better late than never.Please try again later. Please try again later. Paul C. 4.0 out of 5 stars I needed to buy a few specialized connections and adapters from monoprice.com to get the rig working.

They arrived today, I hooked it all up, and the sound is impressive. That said, once setup and running, the sound was worth it. Still working on the sub placement to get the right tonal balance, but very pleased nonetheless. I went with 4 stars overall, being a bit hard on them for the connections, and maybe a bit generous on the sound but I was rating them as computer speakers, not hifidelity components. Also, mine came with these short forked stands for the satellites.Please try again later. Please try again later. Drrnhrn 5.0 out of 5 stars I tried to set them up on mine, and didnt have the right jacks either.Boy was I wrong. had to pick my jaw off the floor, It had clear awesome sound like a Bose worth hundreds of dollars.Please try again later. Please try again later. Ullas Bhai 5.0 out of 5 stars Its a shame that these were discontinued !!Please try again later. Please try again later. Please try again.In order to navigate out of this carousel, please use your heading shortcut key to navigate to the next or previous heading. Register a free business account Exclusive access to cleaning, safety, and health supplies. Create a free business account to purchase Please try your search again later.You can edit your question or post anyway.It has 2 satellite speakers, 1 powered subwoofer, and digital audio interface. These speakers are not analog speakers. System requires a digital output sound card; digital output must be a 3.5mm minidin digital out. Please verify that your computer has a digital sound card as I do not accept returns due to compatibility issues. The speakers can also be connected to any DVD player with a digital coaxial connection.Amazon calculates a product's star ratings using a machine learned model instead of a raw data average.
