Jodie 5.0 out of 5 stars I was hoping for something to give me archival scans of historical documents. The scanner is simple to operate and Im happy with the quality of the scans. <http://www.peugeot-machecoul.fr/admin/userfiles/4-speed-manual-cars.xml>

I rated this scanner 5 stars because I would certainly recommend it to anyone looking for a handheld portable scanner; however, you will also want to consider your own skill at holding the scanner steady while moving it across a page. Although I havent used the scanner a lot yet and perhaps more practice will help Im struggling with that. Im trying to devise a way to move the scanner smoothly across the page while at the same time holding the document or photo securely. Its particularly difficult with smaller items. If you are rocksteady and precise, Im sure you will have excellent results. Bottom line Im very happy with the scanner itself. I will definitely take it with me when traveling, however at home I will use my flatbed scanner. If you are considering a purchase, just consider your own dexterity as well. There sometimes is not a copier available. It was very easy to set up including the clock which shows the date and time the document was copied. Now I carry it in my attache case and when a copy is needed, I get it out and run it over the documents. I then print them and put them in the file. I was so impressed with the scanner that I bought one for a CPA friend and he is equally impressed. The one problem that I have had is that the instructions state that you can scan a document into the computer and make changes to it such as an invoice or other document that has blanks to fill in. The instructions do not tell you how to convert the document so that changes can be made to it. The instructions could be better. I have been unable to figure out how to do that. I am not a computer expert so I may be able to get someone to show me how. I highly recommend this scanner. I use this one for scanning articles from publications which I review, documents I need to store, publish or email, etc. Works great and is easy to setup basically Plug and Play and produces a great scanned image. Refer this to so many people. However, the quality of the scans are subpar.

I have tried it on each of the settings and on both resolutions and none produce a fine quality scan. The quality of the scanned document is poor and difficult to read. The file sizes are large so you would assume they are high quality. They are large files but essentially just a waste of space. The OCR is Abbyy Fine Reader which is able to produce quality OCR, but it doesnt make up for the low grade scans. Taken a lot of the hassle away for me in scanning documents and photos. It's probably no good by now anyway because the rubber parts get crumbly with age. So I'm recommending two devices from Brookstone, which has stores in malls around the country as well as an online order center.

Clean the kitchen sink, then fill it half full with warm water. Add some mild detergent. Ivory Liquid works well and submerge each record for a few seconds while wiping it with an old t-shirt. Rinse with warm. Brush it gently from back to front using a child's watercolor paintbrush. The tool in question, Brookstone's iConvert, allows you to make digital files from old slides. Great idea! Slides can be a wonderful resource for genealogists, but few of us have working slide projectors any more. Transforming our slides into a more useful, contemporary format is a valuable project to undertake. As I personally have a huge crate of my own family slides waiting to be digitized, I knew that figuring out this scanner's issues would be useful both for my father-in-law and, potentially, for myself. First, the instruction manual glosses over some important steps. Second, the accompanying software was not designed to be used in an intuitive way. If you read the customer feedback on the Brookstone website about this tool, you'll see that many of the iConvert's negative ratings spring from these problems. Only 44% of customers would recommend the iConvert to anyone else, according to Brookstone. To save others from having to go through the same process, I decided to write up a few notes on using iConvert. The following steps worked for me. Your computer will restart automatically as the final step in the installation process. Even though this name bears no resemblance to iConvert, it really is the software that runs your slide digitizer. Double-click on the FotoLite icon. Select the folder on your computer where you want the digitized slide files to be stored. Close the FotoLink window. Slip the tray into the slot on the right-hand side of the silver iConvert box.

There does not appear to be a way to figure out when your slide is in the correct position. You'll just have to play with it until you get it right. More about this issue in step 6. This time, because of the action you took in step 5, a different window will appear than you saw in step 3. This time around, you will see a preview of the slide to be scanned. The image inside the blinking dotted rectangle is the image that will be captured as a digital file. If it doesn't look right to you — perhaps the image is oddly cropped or incomplete — manually adjust the position of the slide tray inside the silver box. To see if your adjustment did the trick, click the "prescan" button in the FotoLite window your computer screen. Keep adjusting the slide tray and clicking the "prescan" button until you've got it right. You may have to wait 5 or 10 seconds, but it will work. When the image has been scanned and saved in the destination folder you selected in step 3, the FotoLite window will close automatically. Are there other slide digitizers you have been using. Which one would you recommend. Notify me of new posts via email. To find out more, including how to control cookies, see here. This device connects to whatever device you've got on hand that can push images via HDMI, with a set of controls that so simple to understand, you'll not need to peek at the instructions even once. You get a 3 foot HDMI cable, a microHDMI adapter, and a miniHDMI adapter included in the package. This means that if you've got a smartphone that you're using to output to HDMI and you're in need of

some extra power for the phone itself, you've only to plug into the projector with your standard USB cord to the phone. You've got an audio out port though for extra speaker action if the standard inbuilt speakers are not enough for you. The focus of your picture is done with a simple adjuster up near the front lens, the projection shining bright and up to 1080p resolution in a 60inch image on your wall.
